

STATEMENT ON EU BATTERIES AND ACCUMULATORS AND WASTE BATTERIES AND ACCUMULATORS (BATTERIES) DIRECTIVE 2006/66/EC AND REGULATION 1103/2010.

Eaton's MTL product line sells products world-wide that must meet the environmental regulatory requirements of different countries and regions. European Directive 2006/66/EC seeks to minimise the impact of batteries and accumulators and waste batteries and accumulators on the environment. Eaton's MTL product line sells very few products which contain batteries regulated under Directive 2006/66/EC. In all cases the products conform to the materials restrictions in Directive 2006/66/EC and the labelling requirements in Regulation 1103/2010, and Eaton's MTL product line has signed up to the required reporting and compliance schemes.
