MTL5000 SERIES

After many years of excellent service many products in the MTL5000 range are now being replaced by the new MTL5500 series modules. The MTL5500 offers many advancements in design and performance along with new functionality and higher packing density.

Some of the MTL5000 series will be retained to complete the DIN rail isolator range from MTL. These, along with the new MTL5500, provide a comprehensive and flexible product offering. Many of the MTL5500 modules are also available in the MTL4500 backplane mounting format, giving uniformity across MTL's DIN rail and system solutions.

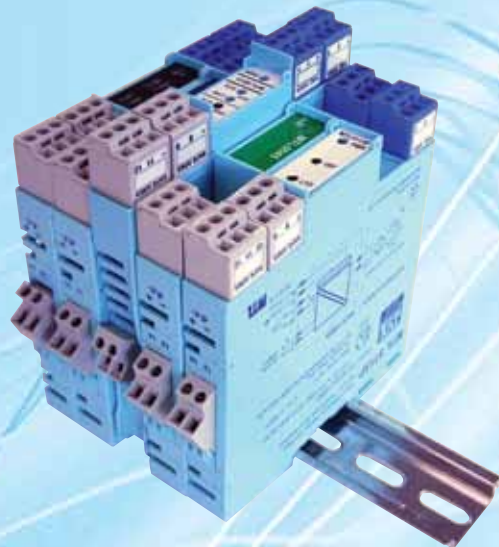

The MTL5000 modules, due for termination, will continue in manufacturing until early 2012. However, any requirements for spares must be identified as soon as possible to ensure availability.

MTL5500 SERIES

MTL5500 replacement in existing installations

The MTL5500 is designed with the same 16mm case width and similar profile to the MTL5000 series. This permits the replacement of an MTL5000 module with the new equivalent in the MTL5500 range.

In most instances the cable connection to the field terminals are identical so the module can simply be replaced and the terminals reconnected in a matter of seconds. The power supply plugs are also compatible on both ranges.

The table on the next page shows the migration path for each of the modules in the MTL5000 series. If you require any further help or information, please contact your local MTL representative.
