

STATEMENT ON EU WASTE ELECTRONIC AND ELECTRONIC EQUIPMENT (WEEE) DIRECTIVES
2002/96/EC and 2012/19/EU

Eaton's MTL product line sells products world-wide that must meet the environmental regulatory requirements of different countries and regions. European Directives 2002/96/EC and 2012/19/EU do not directly apply to products, but define the requirements on a Producer to provide for the end-of-life recovery and recycling of electronic products when they become waste at the end of their life. Eaton's MTL product line has signed up to the required compliance schemes sufficient to ensure this. All required products have been marked with the "crossed out wheelie-bin" symbol where appropriate, which indicates that the item is electronic or electronic equipment, and must be disposed of in the appropriate manner.
