This certificate is issued as verification that a sample(s), representative of production, was assessed and tested and found to comply with the IEC Standard list below and that the manufacturer's quality system, relating to the Ex products covered by this certificate, was assessed and found to comply with the IECEx Quality system requirements. This certificate is granted subject to the conditions as set out in IECEx Scheme Rules, IECEx 02 and Operational Documents as amended.

STANDARDS:

The electrical apparatus and any acceptable variations to it specified in the schedule of this certificate and the identified documents, was found to comply with the following standards:

IEC 60079-0 : 2011 Explosive atmospheres - Part 0: General requirements

Edition: 6.0

IEC 60079-11 : 2011 Explosive atmospheres - Part 11: Equipment protection by intrinsic safety "i"

Edition: 6.0

*This Certificate **does not** indicate compliance with electrical safety and performance requirements other than those expressly included in the Standards listed above.*

TEST & ASSESSMENT REPORTS:

A sample(s) of the equipment listed has successfully met the examination and test requirements as recorded in

Schedule

EQUIPMENT:

Equipment and systems covered by this certificate are as follows:

The MTL700 Series Shunt Zener Diode Barriers are designed to restrict the transfer of energy, from unspecified safe area equipment to intrinsically safe circuits, by limitation of voltage and current. The range consists of single and dual channel barriers covering polarised (positive and negative), non-polarised, non-polarised star-connected barriers and diode return barriers.

The barriers consist of electronic components on a single printed circuit board encapsulated within a moulded plastic enclosure which incorporates two pairs of screw terminals. The barrier is connected to earth via duplicated earth mounting studs for connection to an earthed bus bar. Alternatively the earth connection may be made via a spring mounted foot suitable for mounting on a DIN Rail.

The barriers are asymmetrical and have a blue label defining the hazardous area terminals.

The following barriers are coded [Ex ia Ga] IIC & [Ex ia Da] IIIC (-20°C ≤ Ta ≤ 60°C):

MTL706-, MTL707+, MTL708+, MTL710+-, MTL710ac, MTL710P+, MTL715+-, MTL715P+, MTL722+-, MTL722P+, MTL728+-, MTL728ac, MTL728P+, MTL751ac, MTL755ac, MTL758+-, MTL760ac*, MTL761ac, MTL761Pac, MTL764+-, MTL764ac, MTL765ac*, MTL766ac, MTL766Pac, MTL767+-, MTL768+-, MTL772ac*, MTL778ac*, MTL779+-, MTL786+-, MTL787+-, MTL787SP+, MTL787S+, MTL788+-, MTL788R+-, MTL791+&-, MTL796+-

The following barriers are coded [Ex ia Ga] IIB & [Ex ia Da] IIIC (-20°C ≤ Ta ≤ 60°C):

MTL707P+, MTL729P+

Reference to data in the standard shows that with the maximum output current and voltage as defined in the above table, such a value has a factor of safety of at least 1.5 for Group IIB.

Notes for both Group IIC & IIB Barriers:

- +/- - Shunt zener diode barriers may be of positive or negative polarity dependant on the configuration of the zener diodes. The certification label will detail the exact type.
 ac - non-polarised barriers
 ac* - non-polarised star connected
 Diode - diode return barrier
- Circuit configuration for output parameters
 - Single channel
 - a1 - First channel of a dual channel barrier
 - b - Both channels of a dual channel barrier connected in parallel, with respect to earth.
 - c - Both channels of a dual channel barrier interconnected, with no earth return.

3. The intrinsically safe terminals of two channels of the MTL768 and the MTL779 dual barriers must not be interconnected in Group IIC atmospheres. It is acceptable for these barriers channels to be interconnected in Group IIB/IIA atmospheres.
4. The hazardous area terminals of each of the barrier outputs marked † must be considered at the voltage U_0 . This is considered as the theoretical maximum to which a capacitive load across the hazardous area terminals could become charged by leakage through the series blocking diodes. This voltage does not contribute to the output current.

Load Parameters

The capacitance or either the inductance or the inductance to resistance ratio (L/R) of the load connected to the output terminals must not exceed the following values.

** Group IIB parameters also applicable for associated apparatus [Ex ia Da] IIIC

Notes:

- 1) The above load parameters apply when one of the two conditions below is given:
 - the total L_i of the external circuit (excluding the cable) is < 1% of the L_o value or
 - the total C_i of the external circuit (excluding the cable) is < 1% of the C_o value.
- 2) The above parameters are reduced to 50% when both of the two conditions below are given:
 - the total L_i of the external circuit (excluding the cable) is \geq 1% of the L_o value and
 - the total C_i of the external circuit (excluding the cable) is \geq 1% of the C_o value.

The reduced capacitance of the external circuit (including cable) shall not be greater than 1 μ F for Groups IIB & IIA and 600nF for Group IIC.
